## DETAILED ACTION

### *Response to Amendment*

1. The amendment filed 1/21/03 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 18-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Heidemeann (US 5,335,109 published 5,335,109).

With regard to claims 18-19 and 24, Heideman discloses a doped optical amplifying fiber (#3) which operates via stimulated emission. The fiber is pumped via the pump source #4 which causes population inversion thereby permitting stimulated emission to occur. The combined pump signal is then filtered via #6a or #6b. The output of the fiber is subsequently measured by the photodiode (#1).

With regard to claim 20, the receiving device is the photodiode (#1).

With regard to claim 21, fiber amplifiers are inherent form a ring.

With regard to claim 22, the photodiode (#1) is placed at the output of the amplifying fiber.

With regard to claim 23 (as it is best understood), the photodiode measures the intensity (amplitude<sup>2</sup>) at the output of the amplifier.

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 23 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 23 claims measuring the amplitudes of the signal at the detector. It is not possible to measure an amplitude of an optical signal. Rather, one of ordinary skill in the art measures the intensity (amplitude<sup>2</sup>) of an optical signal.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3663

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
